The counselling process is, in many ways, is like an educational experience. The individual can learn more about him/herself, but also acquires new skills. Sometimes, counselling involves learning more about a particular condition (e.g., depression, anxiety, eating disorders) by which the person is affected, so that he/she can better understand treatment options. Below are some examples of what faculty can gain from personal counselling:

- greater self-acceptance and self-esteem

- better expression and management of emotions, including anger
- relief from depression, anxiety or other mental health conditions
- increased confidence and decision-making skills
- ability to manage stress effectively
- improved problem-solving and conflict resolution abilities
- greater sense of self and purpose
- recognition of distorted thinking
